

**XP95 Analogue Base**  
Installation guide

Item Number: 201-0004

**Description**

The XP95 base has been designed to have a 'one way only' fit.

By means of a unique, patented 'XPERT card' the address information is held in the base while keeping the base entirely free of electronic components. This coded plastic card is inserted into the base, so that the address remains the same, no matter how often the detector is replaced by similar devices.

**Installation**

*Observe anti-static precautions at all times*

1. Wire as shown in Figure 1 and Figure 2 for Common Remote LED

**Notes**

1. Polarity must be observed on detectors beyond the one driving the remote indicator
2. The earth terminal is provided for easier installation and is not required by the detector head.
