Case Study

UnitingSA West Lakes

Ampac protects UnitingSA's five-storey residential aged care facility in West Lakes.

UnitingSA West Lakes is a premium residential aged care facility. The five storey development includes 17 independent living apartments, residential aged care and support, as well as a variety of shops and services on the ground floor.

Location:	Adelaide, South Australia
Sector:	Healthcare
Products:	FireFinder^{PLUS} EvacU^{Elite}
Completed:	2021

The Challenge

- Aged Care Facility
- Muliple Occupancy

The Solution

Working with the team at Online Fire, Ampac provided a fire detection and evacuation system for the facility. The system included Ampac's EvacU^{Elite} Emergency Warning and Intercom System combined with the FireFinder^{PLUS} Addressable Fire Alarm Control Panel and detectors.

The EvacU^{Elite} features a fully configurable touch-screen user interface, meaning the layout of the Emergency Warning and Emergency Intercom System Control Widgets could be setup in a way that best suited the client. The new Circuit Breaker and Battery Isolator designs also meant that the panel itself was less busy and easy to install and commission.
