About FireFinder^PLUS

The FireFinder^PLUS Addressable Fire Alarm Control Panel is a truly modular solution, offering flexibility, control and visibility to the user.

With a variety of chassis sizes and optional add- ons, the FireFinder^PLUS can be tailored to suit the requirements of your project.

The FireFinder^PLUS is compatible with the Apollo range of XP95 and Discovery Detectors, and is configurable as a peer-to-peer network up to 99 nodes.

About Nimbus

Nimbus is an innovative remote fire alarm management system providing control and monitoring wherever you are.

Nimbus is the ideal tool for building owners, facility property managers, and fire alarm service and maintenance providers who need to receive live event notifications from their connected fire alarm systems.

Benefits of Nimbus include:

- Access infinite data from anywhere
- Digital logbook of all events
- Instant fire system event notifications
- Automatic capture of testing
- Reduce wasted time and money from unconfirmed fire events
- Stay compliant with automated testing and service notifications
