Product Overview

Designed for specialist applications where two discrete emergency warning signals are required by use of Visual Alarm Devices (VADs) to enhance the operation of an EWIS system.

The Dual VXB-VC incorporates two white bodied VADs available in a shallow and deep body design. The shallow body unit offers rear cable entry and is ideal for aesthetically pleasing indoor environments. The deep body unit provides both rear and surface cable entry points and is IP rated for outdoor use.

The Dual VADs comprising white and red flash are approved to AS7240.23 at 1 Hz flash rate to provide a coverage range of C-3-8 (white) and C-3-7 (red). A 0.5Hz flash rate with C-3-4 coverage range is switch selectable.

The Dual VADs can also be provided with a red and amber flash for applications requiring an alternative colour flash.
